Overview
Are society’s technological choices open to democratic participation? How are the relations between technology and democracy being reconfigured, and how might they be? In GEOG 650 Technology & Democracy Research, students explore political, cultural, and geographical dimensions of technological change through inquiry-based learning around key social and environmental issues. During Spring 2017, course themes will include geographies of energy and waste, and intersections of the arts and sciences in environmental communication, with a focus on both North Carolina settings and global contexts. As part of group research projects developed over the course of the semester, students produce digital atlases and resource pages, including original maps and reproductions of archival images, and publish them on websites created through UNC’s Digital Commons initiative. Bringing together a combination of seminar, research workshop, and experiential learning approaches, student research groups work collaboratively with guidance from UNC faculty to produce and communicate research that addresses important questions impacting the status of “technology & democracy” in the world today.

Through the inquiry-based learning approach, the purpose of the course is for students to explore the implications of living in a pervasively technological world, and through readings, lectures, and original research, to raise questions about the politics and governance of technology in real world settings. Students will be exposed to a range of research methods and new media practices, including archival methods,
web-based mapping applications, 'counter-mapping', and website building, and encouraged to develop research skills which may be applied in future professional, civic, or scholarly projects.

**Format**

Unusual? Experimental. Just plain odd? Call it “Project- and methods-oriented.” Rather than being evaluated primarily through quizzes and exams, students will be evaluated mainly on the basis of knowledge produced, including active participation in class activities as well as individual and group research and mapping projects. The premise is to combine an inquiry-based learning approach - stemming from the idea that we learn most by asking questions and seeking answers - with experiential education and engagement with real environmental problems.

The weekly seminar will be organized around readings and formal discussion of course texts; lectures and research presentations (by Kirsch as well as occasional visitors); methods workshops; use of artistic, documentary and new media resources; in- and out-of-classroom visits with a range of on-campus experts, organizations, and institutions; and ultimately, our own collaborative research projects. Hence, a “technology & democracy workshop,” as the course used to be called.

**Research emphasis.** Hence, this is also a course about doing research, emphasizing fundamental concerns about the evaluation of sources, interpretation of different kinds of geographical data, explanations, analyses, representation and communication of research findings. Students will develop skills in identifying research problems. Special workshops running throughout the semester will focus on methodology and research practices; cartography and new media; the archive and open source; and other themes. While a set of general project frameworks will be designed for students to engage with, they will develop projects in areas of special interest, and work collaboratively to produce informative, digital media-based projects that include both textual and graphic components.

**Requirements**

- Informed class participation 15%
- “Almost weekly response exercises” 15%
- ‘Mappings’ projects (2): geographies of energy & waste 10%
- Annotated bibliographies (2) 10%
- Group research projects (includes digital atlas and resource pages; research paper) 30%
- Mid-term quiz (1); + final/reflection paper (1) 20%

All assignments (and due dates) will be given in class and posted on sakai. Since student contributions to seminar discussion and research groups are among the major emphases of the course, keeping up with course readings and informal weekly response assignments is essential.
Textbook:

None. Additional required readings, to be read in advance of each week’s meeting, are listed in the schedule below, including several chapters from Key Methods in Geography (Clifford et al., eds, 2010), abbreviated as [KMiG]. Unless indicated, all texts will be posted as pdfs or linked on sakai. You should *expect to read between ~25-65 pages per week* from a variety of sources – academic journals, book chapters, periodicals, websites, in addition to your reading for your research projects, along with some additional materials that may be distributed for class visitors or practicums -- so please set aside time accordingly.

Provisional Schedule & Reading List
Since there are many moving part to syllabus, it remains subject to revision!

Part I: Introduction – TECHNOLOGY & DEMOCRACY Research

Jan 17 Introductions; Energy landscapes

Jan 24 Technology as a keyword
  - Andrew Ross, “Technology” in T. Bennett, L. Grossberg, M. Morris (eds), New Keywords: A Revised Vocabulary of Culture and Society. (Wiley, 2005)

Jan 31 Geog 650 Ackland Study Gallery: Technology & Environment
  *Meet at Ackland Museum, 3:30*

• http://citizensense.net/projects/

Feb 7  Rethinking expertise, science, & democracy; Research projects

• http://www.geoengineeringwatch.org/

• THE LOKA INSTITUTE For Science and Technology of, by & for the People. http://loka.org/

• http://citizensense.net/data-stories/

• Clifford, French and Valentine, “Getting Started in Geographical Research …” [KMiG, 3-15]
  o Recommended: M. Healey & RL Healey, “How to conduct a literature search” [KMiG, 16-35]

Part II: RESEARCH & MAPPING PRACTICUM*: USING GEOGRAPHICAL PERSPECTIVES IN WASTE, ENERGY, AND ENVIRONMENTAL JUSTICE RESEARCH [*tentative schedule: stay tuned to sakai:announcements for scheduling updates]

Feb 14  Mapping social environments. Introduction to web-based mapping applications with Amanda Henley, Geography and GIS librarian. Meet 3:30pm @ the Research Hub @ Davis Library*, 2nd Floor.

• Chris Perkins, “Mapping and Graphicacy” [KMiG, 350-373]

  o See also: http://www.cedargroveinst.org/

Feb 21  Environmental Justice

• North Carolina Environmental Justice Network https://ncejnw.wordpress.com/

Feb 28 Archive; doing historical research Meet 3:30pm @ Wilson Library

• Miles Ogborn, “Finding Historical Sources” [KMIG, pp 89-102]

• Mike Featherstone, “Archive” New Encyclopedia Project, 591-596

• “Mapping #1” due

Mar 7 Creative mapping and counter-cartography workshop:

• Rob Bartram, “Geography and the Interpretation of Visual Imagery” [KMIG, pp 131-140]

• http://www.countercartographies.org

• http://publiclab.org/
  o http://mapknitter.org/

• Annotated Bibliography and Mid-Term Quiz (take-home) due

Mar 14 SPRING BREAK NO CLASS

Part III: MAPPING GEOGRAPHIES OF ENERGY AND WASTE

Mar 21 Energy landscapes

• http://www.gold.ac.uk/news/citizen-sense-pennsylvania-invests/

Mar 28 The Superfund and geographies of waste; Energy futures; Visiting speaker*: 
UNC Superfund Research Program (http://sph.unc.edu/superfund-pages/srp/)

• http://www.epa.gov/superfund/ [Selections]
• https://www.epa.gov/hfstudy (Selections: EPA’s Study of Hydraulic Fracturing for Oil and Gas and Its Potential Impact on Drinking Water Resources)

• “Mapping #2” due

Apr 4 Projects: Research practicum

• Meghan Cope, “Coding Transcripts and Diaries” [KMiG, 440-452]

• Recommended (again): M. Healey & RL Healey, “How to conduct a literature search” [KMiG, 16-35]

Apr 11 Going nuclear?

• “Rethinking Nuclear” (2012 GEOG 650 Digital Atlas) https://rethinkingnuclear.web.unc.edu/

• https://www.weforum.org/agenda/2016/03/5-years-after-fukushima-world-nuclear-powerhouses/

• Gerry Canavan, “After Fukushima, a tour of the Shearon Harris nuclear power facility” Independent Weekly 6/01/2011.

• http://www.wral.com/duke-suspends-plans-for-shearon-harris-expansion/12408113/

• Dan Frosch, “Amid toxic waste, a Navajo village could lose its land” New York Times Feb 19, 2014.

Apr 18 New models of science and public engagement

• Syracuse Community Geography & Syracuse Hunger Project http://communitygeography.org/

• http://www.loka.org/trackingconsensus.html

Apr 25 Technology & Democracy Workshop 2015 Teknologirådet*: NC Energy futures

• [*Technology Councils (Danish)] Readings TBA

• Annotated Bibliography 2/Final reflection papers due
Please note that your full participation and observance of the Honor Code is expected in this course.
